

GMAT S-1. Mathematics Review for the GMAT and GRE (CRN: 30257)

Instructor to be announced

This course reviews the mathematics segments of the business school and graduate school aptitude tests, including a review of algebra, geometry, word problems, data sufficiency, and graph interpretation. Class sessions include both lectures and problem solving, and they offer strategies for solving typical exam problems. There will be supplemental homework assignments. Note: room and board is not available for students taking only this course.
